

Save Time, Money, and Valuable Resources with WebPOS

Accepting credit card transactions doesn't have to be complex. WebPOS is a secure, internet-based point-of-sale credit card processing system that replaces the cost and inconvenience of using a handheld device or paper transaction process. WebPOS also easily captures and stores transaction data to provide you the business intelligence you need to grow your business. Handheld POS devices require time-consuming software downloads, ongoing repairs and supply costs, and offer virtually no storage capabilities. A paper transaction process is an intensely manual process that can increase both the time involved with settlement and the potential for errors.

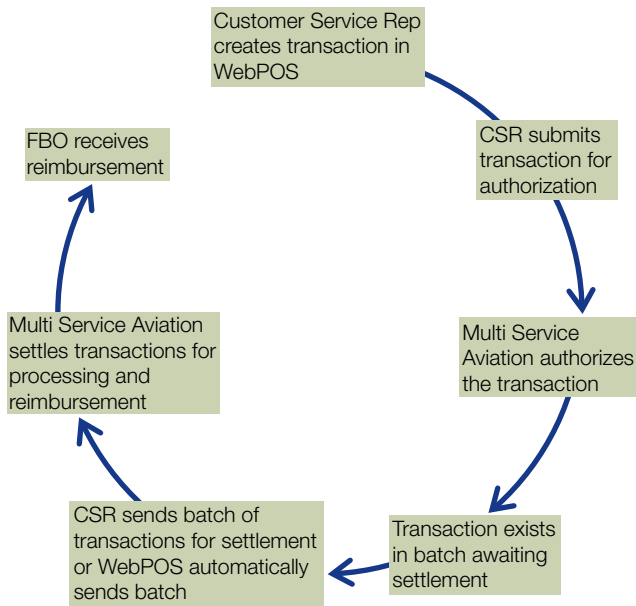

Easy to Use, Low-Cost Solution

WebPOS is an ideal solution for FBO's, resellers, oil and fueling companies that is easy to use, minimizes the hassle of hardware/software changes, and improves overall transaction processing speed using the internet versus a standard phone line. WebPOS provides all the same capabilities as our Multi Service Aviation provided POS device including acceptance of the same card types and will not require any reimbursement changes for your accounts receivable organization.

Today's fast-paced aviation environment requires PC's to manage daily operational and financial merchant activities. That same PC can also be used to create, authorize and settle transactions on a daily or scheduled basis. All you need to start using WebPOS is a windows-based PC with USB port, printer, and internet explorer 5.0 or higher. We also recommend using a magstripe reader and can offer you recommendations on various readers. WebPOS' user-friendly features and larger viewing screens are ideal for managing credit card transactions for one or multiple locations. WebPOS' PCI compliant system is currently available in English and U.S. dollar transactions.

Industry Standard Secure Transaction Processing

WebPOS security features are designed to provide the highest level of merchant assurance using the strongest available industry standard SSL protocols. All transactions are encrypted and require a password to access the system to protect valuable client and merchant information. After 15 minutes of inactivity, your secured session will be terminated to prevent unauthorized access to WebPOS.

Integrate Key Business Information to Maximize Operational Efficiency

WebPOS offers several reporting functions including a batch report that gives you complete information about settled or non-settled batches including invoices, products, balances and settlement information. Our payment summary report gives you payment information by date, by card type, and by day of week. Product summary reports provide quantities, price and total sales for fuel and non-fuel products.

If you are looking for a convenient method to integrate transaction information into your business operations, the various output features of WebPOS including downloads to Excel, PDF creation or view only will provide the methods you need to analyze transaction purchasing information to help you plan and streamline business information.

The power to improve the speed, accuracy and costs associated with transaction processing and settlement

Features	Benefits
Cost savings	Decrease costs and time associated with handheld device software downloads, monthly device fees and repair / supply fees

Scalable solution	Simultaneously manage multiple locations to help you grow your business
Integrate transaction data with key business operational information	Real-time information that can be exported to integrate with your operational business information enhancing the quality of your business decisions

How do I become a WebPOS user?

It's easy to use, cost-effective, just give us a call. WebPOS is available for any Multi Service Aviation merchant. We'll ask you to designate one employee to act as the administrator for the account. This employee will then be able to setup other users and maintain or terminate their access. While many of our WebPOS users feel the system is quite intuitive and easy to learn, we also offer two training solutions to help quickly get you accustomed to using this easy online POS option including a comprehensive web-based learning tool and customer service support.
